B-10: 2” OR SMALLER WATER SERVICE LINE WITHOUT MAINLINE TRACER WIRE ..................................... 19
SECTION I – GENERAL

1.1 Authority

The Standard Specifications for Water and Wastewater Service Construction as set forth herein (“Specifications”) are promulgated by the following: Arrowhead Metropolitan District, Bachelor Gulch Metropolitan District, Beaver Creek Metropolitan District, Berry Creek Metropolitan District, Cordillera Metropolitan District, Eagle River Water & Sanitation District, Eagle-Vail Metropolitan District, Edwards Metropolitan District, Town of Avon, Traer Creek Metropolitan District (Village at Avon), and Upper Eagle Regional Water Authority (“District”). The interpretation and enforcement of said Specifications is hereby delegated to the Regulations Administrator of the Eagle River Water & Sanitation District.

1.1.1 Effective Date of Specifications

The Specifications shall become effective immediately upon formal adoption by the District and shall supersede all former specifications for water main construction. The most current version of these Specifications is available at www.erwsd.org

1.1.2 Revisions, Reference, Amendments, or Additions

The Specifications may be revised and/or amended. Such revisions, amendments, and additions shall be binding and in full force immediately upon formal adoption by the District.

The latest edition of the International Plumbing Code (IPC) is incorporated herein by reference. In cases where conflicts arise between these Specifications and IPC, the more stringent shall prevail.

1.1.3 Definitions

Please reference the Rules and Regulations for Water and Wastewater Service, Article II.

1.2 Development Approval and Infrastructure Acceptance

Please reference the Rules and Regulations for Water and Wastewater Service, Articles VIII and IX, respectively.

1.3 Variance

The District recognizes that the strict and literal interpretation of these Rules and Regulations may not be possible in all cases. Please refer to Article VII for information on the Variance process.
1.4 Purpose
These Water and Wastewater Service Construction Specifications are intended to insure that the Services extended from the Water System and Wastewater System is constructed so as to not adversely impact the Water System or Wastewater System. The extent of Water Service and Wastewater Service is as defined in the Rules and Regulations, Article II, 2.122 and 2.117, respectively.

1.5 Authorization to Connect
This Appendix provides construction specifications, including testing and inspection requirements related to Services, but does not include all of the requirements for Connection to the Water and/or Wastewater Systems. Customers intending to make a Connection must contact the District prior to any construction or work on the Water Service or Wastewater Service so that all requirements for Connection can be determined. A complete description of the requirements for Connection can be found in these Rules and Regulations, refer to Article IV, Authorization to Connect to Water and Wastewater Systems.

Customers must submit a completed Connection Application (available at www.erwsd.org), a completed service line and meter sizing form and a site plan outlining the following items for both water and wastewater service lines.

- Pipe Materials
- Pipe Sizes
- Depths of Bury
- Utility crossings identified and mitigated by proper separation or by secondary containment.
- Tracer wire installation plan as outlined in Appendix E.

Water service lines must be sized appropriately, and velocities for maximum domestic use must be under 10fps. Under no circumstance may the water service line from the water main to the meter be sized smaller than the meter.

1.6 Services and Meters
Each separately metered unit shall have a separate and independent Water and Wastewater Service Connection to the Main. Along with the Connection Application, The customer shall submit a schematic/diagram for the mechanical room or location where the meter assembly for domestic use, irrigation use and the fire suppression system are to be installed. This diagram should demonstrate conformance to the Rules and Regulations Detail B-05. Meter Size and type are determined by the District after submittal of meter sizing form.
1.7 **Scheduling Inspections**

The Customer shall notify the District when the Water or Wastewater Service is ready for inspection or Connection to the Water or Wastewater Main. Appointments for inspections, testing, Connection, meter inspection, Turn-On, Turn-Off or operation of Water Main valves must be scheduled with the District a minimum of two (2) business days in advance.

1.8 **Joint Service Lines**

Joint water or wastewater service lines are prohibited.

1.9 **Stub Outs**

Stub outs are for the benefit of the property and are not guaranteed to exist; the location and depth may or may not be known. If a stub out is not in compliance with current Rules and Regulations, the Customer shall be responsible for modifying/replacing the stub out to meet current specifications.
SECTION II – WATER SERVICES

2.1 Materials

2.1.1 General Requirements
The District follows, and all water service construction shall conform to, the CDPHE lead-free policy. The joining of dissimilar metals in water service lines is prohibited.

2.1.2 Copper Tubing
Copper Water Services shall be 1", 1.5" or 2" diameter seamless Type K copper tubing in accordance with ASTM B88. Connections shall be compression in accordance with ANSI/AWWA C800 or silver soldered conforming to AMS 4773C. All shall be certified to comply with NSF/ANSI 61, NSF/ANSI 61 Annex G, and NSF/ANSI 372. No lead solder joints shall be allowed. All copper service lines must use full lengths of tubing (i.e. 100' for 1", 60' for 1.5" and 40' for 2") before a splice can be installed.

Installed Type K copper tubing shall be free of kinks, indentations, and damaged areas. Any damaged copper tubing or fittings may be rejected by the District Inspector.

An appropriate size gooseneck shall be made in the Water Service at the corporation valve to prevent the Service from being pulled from the Water Main during backfill and compaction operations.

2.1.3 Polyethylene Tubing (PE)
Polyethylene tubing used for water services shall meet the requirements of AWWA C901, shall be PE4710 high density resin material and conform to ASTM 2737 standards listed for water service pipe in the latest edition of the IPC. All joints shall be brass compression grip ring type with stainless steel inserts or fused. Polyethylene tubing shall have a pressure rating of 250 psi. All polyethylene service lines must use full lengths of tubing (i.e. 300' for 1", 250' for 1.5" and 200' for 2") before a splice can be installed. Pipe dimensions shall meet Copper Tubing Size (CTS) standards.

2.1.4 Ductile Iron Pipe (DIP)
Water services greater than or equal to four (4) inches in diameter are to be constructed of ductile iron pipe, AWWA Class 52, with a pressure rating of 350 psi. Services to be constructed of ductile iron pipe must be designed by a licensed engineer and construction plans must be submitted to the District for approval.

2.1.5 Corporation Stops
Corporation stops shall be constructed of all brass construction with threaded taper or IP thread inlet and grip compression connection out in accordance with ANSI/AWWA
SECTION II – WATER SERVICES

C800 and conform to ASTM B584, UNS C89833 (latest revision). Corporation stops shall be Mueller 300 Ball Type Corporation Valve, Catalog Number B-25008N or B25028N or approved equal.

2.1.6 Curb Stops
Curb stops shall be of all brass construction with compression connections for inlet and outlet in accordance with ANSI/AWWA C800 and conform to ASTM B584, UNS C89833 (latest revision). Curb stops shall be Mueller 300 Ball Curb Valve No. B25209N, or approved equal. For service lines buried at a depth greater than nine and a half (9.5) feet, an extension rod must be placed on the curb stop.

2.1.7 Curb Boxes
Curb boxes shall be cast iron in accordance with ASTM A 48, Class 35B. For curb stops up to 1", curb boxes shall be Mueller H10314 with 89982 lid and stationary rod, part number 828- series, depending on final bury depth. For curb stops larger than 1", the curb boxes shall be Mueller H10336 with 89982 lid.

2.1.8 Saddles
Tapping saddles shall be Mueller BR2S or BR2W, AWWA C800, brass body, 200 psi maximum working pressure, double strap design, with optional 304L stainless steel straps.

2.2 Service Line Design
The alignment of the Water Service shall take the shortest, most direct route from the Water Main to the Water Meter.

2.3 Separation of Services
2.3.1 Horizontal Separation Required
A horizontal separation of ten (10) feet must be maintained between parallel Water and Wastewater Services. Water and Wastewater Services shall not cross.

![Diagram showing minimum 10 feet separation between Water and Sewer pipes]
2.3.2 Horizontal Separation Exception
In cases where it is not practical to maintain a ten foot (10’) separation, the District may allow installation of the sewer pipe closer to a water pipe utilizing encasement or pressure rated joints, provided that the water pipe is on a separate trench or on an undisturbed earth shelf located on one side of the pipe and at an elevation so the bottom of the water pipe is at least eighteen inches (18’) above the top of the sewer pipe.

2.3.3 Vertical Separation Required- Sewer under Water
If the sewer service crosses under a water main but less than eighteen inches (18”) of clear space will exist, the sewer service must be installed with secondary containment. Acceptable options include a pipe casing, concrete, or Controlled Low Strength Material (ex. Flowable fill) extending ten feet each side of the crossing. Crossings involving joint less pipe such as HDPE or copper do not require installation of secondary containment.
2.3.4 Vertical Separation Exception- Water under Sewer
If the sewer service must cross above or over a water main, the sewer service shall be installed with secondary containment unless the vertical distance exceeds five feet (5’). Acceptable options include a pipe casing, concrete, or Controlled Low Strength Material (ex. Flowable fill) extending ten feet each side of the crossing. Crossings involving joint less pipe such as HDPE or copper do not require installation of secondary containment.

2.4 Depth of Bury
Water Services shall be buried a minimum of seven (7) feet and a maximum of nine and a half (9.5) feet below the ground surface.

2.4.1 Service Insulation Requirements
For every foot of cover that is out of compliance with minimum cover requirements for mains, the District shall require the installation of 1-inch of insulation board, minimum 2” insulation required. Insulation will be in accordance with ASTM C578-Type V Standard Specification for Rigid Cellular Polystyrene Thermal Insulation. Compressive Strength will be 100 psi minimum per ASTM D1621. Water Absorption, ASTM C272, 03% by volume, maximum. DOW STYROFOAM™ HIGHLOAD 100, OWENS CORNING FOAMULAR 1000 or approved equal. In addition to maintaining cover from the ground surface, specified cover is required from storm sewer crossings and other cold air sources. See Insulation detail C-14 in Appendix C.

2.5 Bedding Material
Bedding material shall consist of uniformly graded granular material, 3/8-inch or ¾-inch minus screened rock material, installed six (6) inches below and twelve (12) inches above the Service pipe. Refer to Appendix E.
2.6 Underground Warning Tape
Underground warning tape shall be installed twenty-four inches (24") above all buried portions of the Water Service. The tape shall meet the following requirements:

(a) Four (4) mil thick Polyethylene tape  
(b) Solid blue color with black lettering  
(c) Six (6) inches in width

2.7 Tracer Wire
See Appendix E.

2.8 Curb Stop Location
The Curb Stop shall be located a maximum of one (1) foot within the property line or edge of easement, and shall be easily accessible to District personnel. Refer to curb stop detail B-01 and B-02 for services less than or equal to 2" and B-03 and B-04 for services greater than or equal to 4".

2.9 Fire System Services
Commercial Water Service connections for fire suppression systems shall be as required by the local fire authority. Residential connection of the fire suppression system to the Water Service shall occur downstream from the Curb Stop valve and upstream of the meter. Refer to Detail B-05.

2.10 Connections, Testing and Requirements for Inspection

2.10.1 Water Service Connections

Service Lines smaller than four inches (4"):

All Water Service connections of 1", 1.5"- and 2-inch diameter shall be made only by District personnel using a tapping saddle fitting on existing mains.

Service lines four inches (4") or larger in diameter:

Water Service Connections 4 inch (4") in diameter or greater shall be made by a qualified contractor on behalf of the Customer and witnessed and inspected by a District Inspector. For all connections 4" in diameter and larger, a tee shall be installed on the main or a wet tap may be made using a tapping sleeve with prior approval from the District. The tapping sleeve shall be stainless steel Mueller H304 (250 psi working pressure) or approved equivalent. The use of a tapping sleeve shall meet the following conditions:

(a) Tapping sleeve must be approved by the District prior to installation, and may only be installed by an approved contractor
(b) System working pressures shall not exceed the tapping sleeve’s rated working pressure

(c) Tapping sleeves shall not be permitted for service lines with a diameter that is larger than or equal to one-half (½) the diameter of the main being tapped.

(d) Tapping sleeves shall not be permitted for service connections larger than 6” in diameter. A tee shall be installed on the Water Main.

2.10.2 Water Service Testing

Service Lines smaller than four inches (4”):

No disinfection is required on service lines smaller than 4”. Hydrostatic testing of the service line shall use system pressure. The contractor shall backfill the trench at their own risk. Pressure is held for a minimum of two hours and will be accepted if no leaks are measured or observed. If the test fails, the service line will need to be repaired or replaced. In winter conditions, compressed air may be used for testing at the discretion of the District Inspector.

Service lines four inches (4”) or larger in diameter:

The District Inspector will perform high chlorine, low chlorine, bacteriologic, and hydrostatic testing on the Service, similar to a water main. Details of the testing procedures can be found in Appendix C, Section 5. Customer shall provide a minimum of two days advance notice to schedule testing. The testing process typically requires a minimum five day duration before water service can be turned on. Failure to pass these tests will result in the Customer flushing the Service and the District retesting the Service.

2.10.3 Water Service Requirements for Inspection

No Services shall be covered with bedding material or backfill without the District Inspector’s approval. All portions of the Water Service must be visible to the District Inspector for an inspection to be completed.

District personnel must attend all underground Fire Protection Service flush tests in order to operate Curb Stop valves. The District shall be notified a minimum of two business days prior to testing.

Customers requesting Connections after November 15 and before April 15 must provide heating, adequate to prevent freezing of water, in the Connecting area.
2.11 Water Service Line Abandonment
For abandonment of two (2) inch and smaller water service lines or stub outs, the corporation stop must be shut off at the water main and the line disconnected. For abandonment of four (4) inch or larger water service lines or stub outs, a mainline shutdown must be coordinated, the curb stop valve and lateral will be removed, and a megalug cap on the main line tee.

2.12 Meter Assemblies
The following criteria dictate the design and installation of commercial and residential meter assemblies. A meter assembly consists of a pressure reducing valve, shutoff valves, backflow prevention device, water meter, and related appurtenances. All meter assemblies shall be design and constructed per most recently adopted plumbing codes. Please refer to Detail B-05 for a schematic of the approved meter assemblies.

2.12.1 Pressure Reducing Valve (Domestic)
A pressure-reducing valve (PRV) shall be installed on all Water Services upstream of the water meter, ensuring that the water meter and the building plumbing system are protected from fluctuating water system pressures. Water Service will not be turned on until the meter assembly including the PRV is installed. The pressure setting of the PRV shall not exceed 100 psi without written permission from the District. Customers are responsible for ownership, maintenance and operation of Pressure Reducing Valves. The district recommends periodic inspection and maintenance per the manufacturer’s recommendations.

2.12.2 Pressure Reducing Valve (Fire Suppression System)
A pressure-reducing valve (PRV) shall be installed on all fire sprinkler systems to ensure that they are protected from fluctuating water main pressures. The pressure setting of the PRV shall not exceed 200 psi without written permission from the District. Customers are responsible for ownership, maintenance and operation of Pressure Reducing Valves. The district recommends periodic inspection and maintenance per the manufacturer’s recommendations.

2.12.3 Shutoff Valves
A shut-off, or isolation, valve shall be installed upstream of the PRV. Additionally, a shut-off valve shall be installed downstream of the backflow preventer isolating the meter assembly to facilitate repairs. For service lines up to 3 inches, ball or gate valves will be allowed. For service lines 3” and above, only gate valves will be allowed. Butterfly valves are prohibited. Refer to detail B-05.
2.12.4 Backflow Prevention Devices
Backflow prevention devices are required on all Water Services. Refer to Appendix G of these Rules and Regulations for Backflow Prevention regulations.

2.12.5 Water Meter
All domestic connections to the District's Water System shall include a Water Meter. The meter type and size shall be determined by the District. The District will provide the Customer with a meter once the Customer has paid the appropriate meter fee.

The Customer shall install the meter per the specifications below.

(a) The location of the meter is subject to District approval. The meter location shall be adequately insulated to protect from freezing, fully accessible, adequately ventilated, well-lit, and shall not meet the definition of confined space, as defined by the Occupational Safety and Health Administration (OSHA), unless approved by the District. The design of meter pits must be approved by the District and shall be in conformance with Section 2.13. Meters in crawl spaces are not recommended. Crawl space meter installations are subject to prior approval by the District's meter technician. Any meter installation in a crawl space must have adequate lighting, adequate working room, and be within (3) feet of the opening.

(b) The District shall inspect the installation of all water meters. The Customer will be provided with a three-strand wire for installation of a transmitter. Prior to meter inspection and water Turn-On, the Customer shall install the meter assembly and the wire from the meter location to an appropriate transmitter installation site. The transmitter will be located five (5) feet above ground in an accessible location free from snow that will provide year-round access for District personnel. The maximum distance from the meter to the transmitter shall not exceed one hundred (100) feet without approval of the District. Meters shall be installed in a horizontal position unless manufacturer specifications allow. The Meter shall be no higher than three (3) feet above and no lower than six (6) inches above the floor, as measured from the bottom of the Meter.

(c) The Customer is solely responsible for protecting the meter from freezing, or any other physical damage.

Water will remain turned off until the District accepts payment of all Connection fees.
2.12.6 **Bypass Piping on Commercial Meters**

All water meters greater than 1.5 inch in size and serving six (6) or more Residential Units, mixed commercial/residential developments, or a commercial development shall be installed with a bypass line equipped with isolation valves to allow for maintenance of the meter without interruption of water service to the Customer. The bypass line will be unmetered and secured with a District padlock. Refer to Detail B-05.

2.13 **Stop and Waste Valves**

Stop and waste valves are prohibited.

2.14 **Meter Pits**

Meter pits shall be adequately sized to contain the meter assembly and allow for maintenance of the assembly. Meters will be required to be installed in a precast concrete manhole with an overall depth of 84 inches.

Meter pits shall be installed at the property line or the edge of easement, and downstream of the Curb Stop valve. A 5’ high 4” x 4” post shall be provided for the Radio Transmitter Unit. A 3-strand wire provided by the District shall be run from the meter to the top of the post. Refer to Detail B-06 and B-07.

2.14.1 **Manhole Bases**

Precast concrete, ASTM C478, minimum 48-inch diameter or District approved alternative.

2.14.2 **Manhole Sections**

Precast concrete, ASTM C478, with the inside lip higher than the outside lip, minimum 48-inch diameter or District approved alternative. Concrete cone sections shall be eccentric.

2.14.3 **Manhole Rings and Covers**

For installations located in public rights of way manhole rings and covers shall be cast iron, ASTM A48, with a flat lid with the lettering “WATER” cast on the cover. Ring and cover combined weight shall be greater than 255 pounds and machined to fit securely with a non-rocking cover. Lid shall be waffle patterned, and able to withstand HS-20 traffic loading.

2.14.4 **Manhole Steps**

For concrete manholes only, non-skid steps shall be installed capable of carrying a load of 1,000 pounds, installed six (6) inches from the face of the manhole. The steps shall conform to ASTM C478 and be plastic coated.
2.14.5 Manhole Joint Sealant

Double RUBR-NEK LTM butyl rubber flexible gasket-type sealant shall be applied to all manhole joints with RUB'R-NEK primer. One (1) inch on 48-inch diameter manholes; 1.5 inch on all larger sizes.

2.15 Repair Couplings

Repairs to Water Services located between the curb stop and the structure that require couplings shall be made only by the use of a silver-soldered joint or electrofusion for copper and HDPE, respectively. Solid sleeves are to be used with DIP. All repairs shall be inspected and approved by the District prior to backfill.
SECTION III – WASTEWATER SERVICES

3.1 Materials

3.1.1 Polyvinyl Chloride (PVC) non-pressure:
SDR-35/SDR-26

4 to 8 inches (4" to 8"): ASTM D3034, SDR-35/PS46 or ASTM D3034, SDR-26/PS115

Maximum pipe length shall be 20 feet (20'). Joint lubricant shall be supplied by the pipe manufacturer. Joint lubricant shall be non-toxic and water-soluble.

3.1.2 Polyvinyl Chloride (PVC) pressure:
Yelomine: SDR-21, Restrained joint PVC pressure pipe and fittings having a minimum cell classification of 12454, as defined in ASTM D1784. Conform to ASTM D2241 "Standard Specifications for PVC, pressure rated pipe, 200 psi (SDR Series)."

AWWA C-900 for 4 " through 8" diameter pipe, pressure class 235 psi, DR18, with push-on joints and flexible elastomeric seals ASTM D3139/ASTM F477. All spigot ends shall be beveled to manufacturer's specifications with gaskets meeting ASTM F477 and joints in compliance with ASTM D3139.

For 1 ½" service lines utilizing an ejector pumping system, either Polyethylene (PE) or PVC shall be used. PE piping shall be AWWA C901, pressure class 150 psi. Joints shall be fusion type in accordance with AWWA C901. PVC shall be schedule 80 meeting the requirements of ASTM D1785, with solvent welded, socket type fitting meeting the requirements of ASTM D2467.

3.1.3 Ductile Iron:

3.2 Service Line Design

(a) The Wastewater Service gravity piping shall be four (4) inch or greater in diameter.

(b) Gravity wastewater services shall be installed at a constant grade of not less than one quarter (¼) inch per foot, (2%) with a minimum of bends and no glue joints.
(c) Clean Outs should be installed every 100 feet, at every change of direction 45 degrees or greater, and a maximum of three (3) feet from the face of the building. Cleanouts located within ROW require a traffic rated cleanout cover.

(d) If the service line is pressurized via lift station or ejector system, the service line shall be designed by an Engineer and submitted with the Connection Application for review and approval by the District.

(e) The service line must be electronically locatable from the sewer main to the structure or building being served, terminating at the cleanout located near the building footprint. Refer to Appendix E.

3.3 Separation of Services
Refer to Appendix B, Section 2.3

3.4 Depth of Bury
Wastewater Service piping shall be buried a minimum of four feet six inches (4’ 6”) below the ground surface. If minimum bury depth cannot be achieved, insulation is required per Appendix D. A depth of bury greater than fourteen (14) feet requires the approval of the District.

3.5 Bedding Material
Bedding material shall consist of uniformly graded granular material, 3/8-inch or ¾-inch minus screened rock material, installed six (6) inches below and twelve (12) inches above the Service pipe. Refer to Appendix E.

3.6 Underground Warning Tape
Underground Warning Tape shall be installed twenty four inches (24”) above all buried portions of the Wastewater Service. The tape shall meet the following requirements:

   (a) Five (5) mil thick Polyethylene tape
   (b) Solid green color with black lettering
   (c) Six (6) inches in width

3.7 Tracer Wire
See Appendix E
3.8 Connections, and Requirements for Inspection

3.8.1 Wastewater Service Connections
The connection of the Wastewater Service to the Wastewater Main shall be made as follows:

(a) A factory wye shall be installed on all new mainline installations for service line stub outs on gravity mains. The wye shall be located no closer than ten (10) feet from a manhole. A saddle tap, provided by the District, shall be used on new service line connections to existing mainlines. All service connections shall be above spring line.

(b) On four inch (4") or six inch (6") diameter new service connections to existing mains, a saddle connection is required. The saddle connection shall be located no closer than ten (10) feet from a manhole. The flow line of the Service pipe shall enter the Main above the spring line of the Main. Connections into manholes are prohibited. All Connections up to six (6) inches in diameter shall be made by District personnel.

(c) If the Service pipe is eight (8) inches or greater in diameter, the connection shall be made into an existing manhole or into a new manhole placed on the existing Main. Connections eight (8) inches or greater in diameter shall be made by a qualified contractor on behalf of the Customer and witnessed and inspected by a District Inspector.

3.8.2 Wastewater Service Requirements for Inspection
No Services shall be covered with bedding material or backfill without the District Inspector’s approval. All portions of the Wastewater Service must be visible to the District Inspector for an inspection to be completed.

3.9 Stub Out Abandonment
If a Stub Out pre-exists on a property and will not be utilized by the Customer, the Stub Out must be abandoned by the Customer by one of the following methods:

1. The Customer shall cut and cap the service at the main. The abandonment shall be inspected by the District prior to backfill. The use of a Stub Out for Connection to the Wastewater Main must be approved by the District.

2. The Customer shall cut and cap the service at the property line and abandon the stub out at the main with a Cured-In-Place Pipe Point Patch (CIPP-PP). The abandonment shall be inspected by the District prior to backfill. The use of a CIPP-PP shall meet the following conditions:
a. The CIPP-PP shall be designed against corrosion and typical chemicals found in domestic sewage. The System Supplier shall provide testing data that supports the chemical resistance in accordance with ASTM F1216 on the exact CIPP-PP system to be used.

b. The CIPP-PP shall be a full wrap section; the CIPP-PP liner sheet shall be flat with one end overlapping the second end by a minimum of 10% and sized accordingly to create a circular liner equal to the inner diameter of the pipe. To ensure a properly tight fitting full wrap in the pipe and consistent minimum wall thickness, pre-manufactured tubes will not be permitted.

c. The contact surface area of the packer shall extend past the termination points of the CIPP-PP liner, thereby ensuring both ends remain open and fully pressed against the host pipe. The packer shall distribute the excess resin into a natural taper at both ends of the CIPP-PP liner.

d. The resin shall be cured to form the CIPP-PP into a structural, water tight Cured-in-Place pipe-within-a-pipe. When cured, the CIPP-PP shall seal the pipeline section in a continuous tight-fitting, leak-proof seal. The CIPP-PP shall eliminate any visible leakage and shall provide a water-tight seal to prevent root intrusion, infiltration, and exfiltration between the CIPP-PP and the host pipe.

e. The installed CIPP-PP shall be free from visual defects such as foreign inclusions, dry spots, pinholes, major wrinkles (greater than 2% of the pipe diameter) and de-lamination. The system shall be impervious and free of any leakage including exfiltration from the pipe to the surrounding ground or infiltration from the ground to inside the lined pipe.

f. Before the work starts, the Customer shall provide the District with a pre-installation CCTV inspection showing the service tap(s) that will be abandoned via CIPP-PP.

g. After the work is completed, the Customer will provide the District with a post-installation CCTV inspection in the specified video format, including NASSCO PACP coding, showing the completed work including the restored conditions.

h. The materials used for the project shall be certified by the System Supplier for the specified purpose. The System Supplier shall warrant the CIPP-PP materials to be free from defects in raw materials for one (1) year from the date of manufacture. The Contractor shall warrant the “as-built” CIPP-PP.
for a period of one (1) year after installation or from the date of acceptance by the District, whichever is later.

3.10 **Reuse of Existing Sewer Service Line**

The Customer shall provide the District with CCTV footage of the proposed sewer service line for reuse to confirm the sewer service line is an acceptable condition for reuse. Existing service lines with materials that do not meet the current specifications will not be allowed to be reused.

3.11 **Repair Couplings**

Repair Couplings shall be Sheer Guard, Max Adapter or approved equivalent on a wastewater service line must be compatible with the Sewer Service pipe, installed per the manufacture's specifications and inspected by District personnel.

3.12 **Prohibited Discharges**

Floor drains and garage drains shall not be connected to the Wastewater System without written permission from the District. Please refer to Article VI of the Rules and Regulations.
SECTION IV - STANDARD SERVICE LINE FORMS & DETAILS

Form B1: Requirements Checklist for New Service Line Inspection

B-01: Water Service Stub Out with Mainline Tracer Wire
B-02: Water Service Stub Out without Mainline Tracer Wire
B-03: Service Line Tapping with Mainline Tracer Wire
B-04: Service Line Tapping without Mainline Tracer Wire
B-05: Meter Assembly Diagram
B-06: Service Line Meter Vault
B-07: Service Line Meter Vault – Temporary Construction or Irrigation
B-08: Sewer Service Connection
B-09: 2” or Smaller Water Service Line with Mainline Tracer Wire
B-10: 2” or Smaller Water Service Line without Mainline Tracer Wire
Form B1: **Requirements Checklist for New Service Line Inspection**

Failure to meet these requirements may be subject to a $168 Re-inspection fee.

- **1.** The trench shall be adequately benched or shored, and the safety of workers provided for as required by the most recent standards adopted by OSHA. The District inspector reserves the right to refuse to inspect if all applicable OSHA standards are not met or if they feel unsafe in any way.

- **2.** All pipe material, fittings, and appurtenances shall comply with the material specifications listed in Eagle River Water & Sanitation District Rules & Regulations-Appendix B.

- **3.** New taps on existing mains are made by District personnel.

- **4.** Taps must be a minimum of 18” apart and at least 18” from the nearest bell and spigot joint.

- **5.** Water Services shall be buried a minimum of seven (7) feet and a maximum of nine and a half (9.5) feet below the ground surface. If minimum bury depth cannot be achieved, insulation is required per Appendix B, Section 2.4.1.

- **6.** Wastewater Service piping shall be buried a minimum of four feet six inches (4’ 6”) below the ground surface. If minimum bury depth cannot be achieved, insulation is required per Appendix B, Section 2.4.1. A depth of bury greater than fourteen (14) feet requires the approval of the District and may require a change of materials.

- **7.** Gravity wastewater services shall be installed at a constant grade of not less than one quarter (¼) inch per foot, or 2%, with a minimum of bends and no glue joints outside of the structure served.

- **8.** Clean Outs should be installed every 100 feet, at every change of direction equal to or greater than 45 degrees, and a maximum of three (3) feet from the face of the building. Clean Outs are not to be located in ROW.

- **9.** The Curb Stop shall be located a maximum of one (1) foot within the property line or edge of easement and shall be easily accessible to District personnel. Refer to curb stop detail B-01 for services less than or equal to 2” and B-02 for services greater than or equal to 4”.

- **10.** At least ten (10) feet of horizontal separation must be maintained between parallel Water and Wastewater Services. District authorization must be obtained to install Water and Wastewater Services with less than ten (10) feet of horizontal separation. Water and wastewater service lines shall not cross. In cases where it is not practical to maintain a ten-foot (10’) separation, refer to Appendix B, Section 2.3.2.
☐ 11. The trench shall be excavated so that a minimum clearance of six inches (6") shall be maintained on each side of the pipe for proper placement and compaction of the bedding or backfill material.

☐ 12. Bedding material shall consist of uniformly graded granular material, 3/8-inch or 3/4-inch minus screened rock material, laid six (6) inches below and twelve (12) inches above the service pipe.

☐ 13. Tracer wire on is required on all water service lines and shall be #12 AWG 0.1019” diameter copper conductor or copper clad steel insulated with a 30 mil, high-density, high molecular weight polyethylene (HDPE) insulation, blue in color, and rated for direct burial use at 30 volts. Service line tracer wire shall be connected to mainline tracer wire using approved splice connectors. If no mainline tracer wire is present, a grounding anode will be installed beneath the tapping saddle. Tracer wire shall be spliced at the curb stop, and an anode, with separate anode lead wire, installed at that location. An at-grade tracer wire access box shall be installed adjacent to the curb box. The service line tracer shall then follow the service line and terminate at a grounding anode adjacent to the structure served.

Tracer wire is required on all sewer services and shall be #12 AWG 0.1019” diameter copper conductor or copper clad steel insulated with a 30 mil, high-density, high molecular weight polyethylene (HDPE) insulation, green in color, and rated for direct burial use at 30 volts. Sewer service tracer wire shall be connected to mainline tracer wire using approved splice connections. If no mainline tracer wire is present, a grounding anode will be installed beneath the sewer tap location. Tracer wire shall follow the service line (secured with tape) and shall terminate in an at-grade tracer wire access box located adjacent to the cleanout closest to the structure being served. A grounding anode shall be installed beneath the cleanout wye and a separate anode lead wire shall be installed from the anode to the tracer wire access box.

Please refer to Appendix E for all tracer wire requirements.

☐ 14. Underground Warning Tape shall be installed twenty-four inches (24") above all buried portions of services. The tape shall meet the following requirements: Five (5) mil thick Polyethylene tape, solid green (sewer) or blue in color (water), respectively, with black lettering, six (6) inches in width.

☐ 15. No Services shall be covered with bedding material or backfill without the District Inspector’s approval. All portions of the Service must be visible to the District Inspector for an inspection to be completed.

☐ 16. If a Stub Out pre-exists on a property and will not be utilized by the Customer, the Stub Out must be abandoned by the Customer pursuant to Appendix B.

This requirements checklist does not include all specifications related to water and wastewater service connections. A complete description of the requirements for new service connections can be found in the Rules & Regulations available at www.erwsd.org
ELEVATION

MARKING TAPE TO BE PLACED 24" ABOVE TOP OF PIPE PER APPENDIX C, 3.3

TRACER WIRE PER APPENDIX E

PIPE ZONE BEDDING MATERIAL PER APPENDIX E

2" DIAMETER OR SMALLER SERVICE LINE PER APPENDIX B, 3.1

PROPERTY LINE OR EDGE OF EASEMENT

6' STEEL FENCE POST, PAINT TOP 12" OF POST BLUE

EAGLE RIVER WATER & SANITATION DISTRICT

2' OR SMALLER WATER SERVICE STUB OUT (NO MAINLINE TRACER WIRE)

DRAWN BY: JEC DATE: 03/01/2017

SCALE: NONE REV: 2/4/2020

WWW.ERWSD.ORG
GENERAL NOTES

1. TAPPING SLEEVES PERMITTED PER APPENDIX B 3.8

2. PRIOR WRITTEN APPROVAL IS REQUIRED BY THE DISTRICT.
GENERAL NOTES

1. TAPPING SLEEVES PERMITTED PER APPENDIX B 3.8

2. PRIOR WRITTEN APPROVAL IS REQUIRED BY THE DISTRICT.
GENERAL NOTES

1. ALL WATER SERVICE INSTALL INSTALLATIONS MUST CONFORM TO THE ERWSD CURRENT RULES AND REGULATIONS. THE ABOVE DIAGRAMS ARE THE CURRENT APPROVED METERING SYSTEM ASSEMBLIES. DISTRICT NOTICE IS REQUIRED TO OPERATE THE BYPASS.

2. ALL WATER SERVICE ENTRANCE TO A 2" SHALL BE RESTRICTED TO RESIST APPLICABLE THRUST FORCES. THRUST RESTRAINT SHALL BE DESIGNED BY A PROFESSIONAL ENGINEER.

3. ISOLATION VALVES MUST BE INSTALLED PRIOR TO THE PRV AND AFTER THE BACKFLOW DEVICE AND/OR METER TO FACILITATE FUTURE REPAIRS.

4. ISOLATION VALVE TYPE: FOR SERVICE LINES SMALLER THAN 3 INCH DIAMETER, BALL OR GATE VALVES ARE PERMITTED. FOR SERVICE LINES 3 INCH DIAMETER AND LARGER, ONLY GATE VALVES WILL BE PERMITTED. NO BUTTERFLY VALVES ARE PERMITTED.

5. PRESSURE-REDUCING VALVES (PRV) SHALL BE INSTALLED ON BOTH THE DOMESTIC AND FIRE SUPPRESSION SERVICE LINES UPSTREAM OF THE WATER METER TO ENSURE THAT THE WATER METER AND THE BUILDING PLUMBING SYSTEM, INCLUDING ANY FIRE SPRINKLER SYSTEM, ARE PROTECTED FROM FLUCTUATING WATER MAIN PRESSURES. THE PRESSURE SETTING OF THE PRV SHALL NOT EXCEED 100 PSI FOR DOMESTIC SYSTEMS AND 200 PSI FOR FIRE SPRINKLER SYSTEMS, WITHOUT WRITTEN PERMISSION FROM THE DISTRICT. PRV'S ARE REQUIRED ON ALL FIRE SUPPRESSION SYSTEMS.

6. ALL SERVICES ARE REQUIRED TO HAVE A WATER METER PROVIDED BY THE DISTRICT WITH THREE (3) STRAND 18 GAUGE WIRE RUN TO THE FRONT OF BUILDING FOR REMOTE READOUT (50' SUPPLIED BY DISTRICT). METER INSTALLATIONS SHALL BE NO HIGHER THAN THREE (3) FEET ABOVE AND NO LOWER THAN SIX (6) INCHES ABOVE THE FLOOR LEVEL IN A HORIZONTAL POSITION. IF THE METER IS CURRENTLY LOCATED IN A CRAWL SPACE, THE METER SHALL BE LOCATED WITHIN THREE (3) FEET OF THE ACCESS ENTRY.

7. APPROVED BACKFLOW PREVENTION ASSEMBLIES THAT PROVIDE CONTAINMENT SHALL BE INSTALLED AND TESTED ON ALL NEW SERVICE CONNECTIONS AND SHALL BELocated Downstream From The Meter Prior To Any Other Connection And In A Horizontal Position. SINGLE CHECK VALVES ARE NOT CONSIDERED BACKFLOW PREVENTION ASSEMBLIES AND SHALL NOT BE PERMITTED WITHIN THE SERVICE AREA OF THE DISTRICT.
GENERAL NOTES:

1. THE METER VAULT MUST BE 6' FEET IN DEPTH AND 4' FEET MINIMUM IN WIDTH. IT MUST HAVE 1' FOOT OF 3/4" SCREENED ROCK IN THE BOTTOM OF THE VAULT.

2. ALL COMPONENTS SHALL BE INSTALLED PER DISTRICT STANDARD SPECIFICATIONS. BACKFLOW PREVENTION DEVICE SHALL DRAIN TO DAYLIGHT WHEN APPLICABLE.

3. THE METER MUST BE MOUNTED HORIZONTALLY. THE REMOTE WIRES MUST BE RUN FROM THE METER TO AN OBJECT OUTSIDE THE VAULT (IE. 4"X4" POST, BUILDING, POLE, ETC.).

4. VAULT SHALL BE PRECAST CONCRETE AND CAPABLE OF WITHSTANDING HS 20-44 TRAFFIC LOADING CONDITIONS, IF LOCATION WARRANTS.

5. WHERE PIPES PENETRATE WALLS, USE LINK SEAL OR FILL ANNULAR SPACE WITH NON SHRINK GROUT.

6. CONTRACTOR SHALL SUBMIT VAULT PIPING SCHEMATIC WITH VAULT DIMENSIONS TO DISTRICT PRIOR TO ORDERING MATERIALS OR EQUIPMENT.

7. ALL INSTALLATIONS MUST BE INSPECTED AND APPROVED BY DISTRICT PERSONNEL PRIOR TO BACKFILLING.

8. THIS DETAIL IS APPLICABLE FOR SERVICE LINES SIZES 2" AND UNDER. METER VAULTS FOR 3" AND LARGER SERVICE LINES MUST BE APPROVED BY THE DISTRICT'S CONSTRUCTION REVIEW TEAM PRIOR TO CONSTRUCTION.

9. MULTI-FAMILY, MIXED USE, AND COMMERCIAL METER ASSEMBLIES GREATER THAN 1.5" REQUIRE THE INSTALLATION OF A BYPASS LINE. REFER TO SHEET B-04.

EAGLE RIVER WATER & SANITATION DISTRICT

SCALE: NONE REV: 02/05/2020

WWW.ERWSO.ORG

B-06
GENERAL NOTES:

1. The meter vault must be 8 feet in depth and 4 feet minimum in width. It must have 1 foot of 3/4" screened rock in the bottom of the vault. Manhole and appurtenances shall meet all requirements in Appendix C. 3.7.

2. All components shall be installed per district standard specifications. Backflow prevention device shall drain to daylight when applicable.

3. The meter must be mounted horizontally. The remote wires must be run from the meter to an object outside the vault (i.e. 4"x4" post, building, pole, etc.).

4. Vault shall be precast concrete and capable of withstanding HS 20-44 traffic loading conditions, if location warrants.

5. Where pipes penetrate walls, use link seal or fill annular space with non shrink grout.

6. Contractor shall submit vault piping schematic with vault dimensions to district prior to ordering materials or equipment.

7. All installations must be inspected and approved by district personnel prior to backfilling.

8. This detail is applicable for service lines sizes 2" and under. Meter vaults for 3" and larger service lines must be approved by the district’s construction review team prior to construction.

9. Multi-family, mixed use, and commercial meter assemblies greater than 1.5" require the installation of a bypass line. Refer to sheet B-06.
2" DIA. OR SMALLER SERVICE LINE PER APPENDIX B, 3.1

MARKING TAPE TO BE PLACED 24" ABOVE TOP OF PIPE PER APPENDIX C, 3.5

TRACER WIRE (CONNECT TO MAIN LINE WIRE WITH APPROVED SPLICE PER APPENDIX E)
