Providing efficient, effective, and reliable water and wastewater utility services in a manner that respects the natural environment.
Eagle River Water & Sanitation District (ERWSD) is pleased to present this year’s Consumer Confidence Report, which details the quality water and services we deliver every day. Our constant goal is to provide our customers with a safe and dependable supply of drinking water. This report, and the Upper Eagle Regional Water Authority’s 2009 Consumer Confidence Report, is available online at www.erwsd.org.

Groundwater wells in the Gore Creek Alluvial Aquifer supply our water. Five wells in the area around the Vail Golf Course, each approximately 100 feet deep, can produce 7.5 million gallons per day; two wells in the Matterhorn area of West Vail, each approximately 60 feet deep, can produce 0.749 million gallons per day. Also, a connection to the down valley surface water system through Dowd Junction can provide an additional 1.2 million gallons per day of treated water from the Eagle River. Plus, a surface water, microfiltration plant in East Vail can produce 1 million gallons per day using water from the Gore Creek.

It is important that our valued customers be informed about their water utility. Please contact the Water Division Manager at (970) 949-5887 with questions about this report or to schedule a tour of our facilities.

What’s in your Water Before we Treat it?

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

- **Microbial contaminants**, such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- **Inorganic contaminants**, such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- **Pesticides and herbicides** that may come from a variety of sources, such as agriculture, urban stormwater runoff, and residential uses.
- **Organic chemical contaminants**, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and also may come from gas stations, urban stormwater runoff, and septic systems.
- **Radioactive contaminants** that can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency (EPA) prescribes regulations limiting the amount of certain contaminants in water provided by public water systems. The U.S. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water that must provide the same protection for public health.

Colorado has a statewide waiver for dioxin monitoring. ERWSD has monitoring waivers for glyphosate, nitrite, cyanide, and asbestos because our system is not considered vulnerable to this type of contamination.

Our facilities are designed to treat for known contaminants in our watershed, and to meet or exceed Federal and State requirements. Please contact the Water Division Manager at (970) 949-5887 to learn more about our system or with questions about any of the information presented.

Operations & Management

Your Public Water System is owned, operated, and maintained by Eagle River Water & Sanitation District, a local government. The District, a quasi-municipal corporation and political subdivision of the State of Colorado, is governed pursuant to provisions of the Colorado Special District Act.

A seven member publicly elected Board of Directors is responsible for the overall management and administration of the affairs of the District. Board meetings are open to the public and are generally scheduled for the fourth Thursday of each month. The meeting schedule and other District information is available online at erwsd.org or by calling (970) 476-7480.
HEALTH INFORMATION

About Water Quality

Some people may be more vulnerable to contaminants in drinking water than the public in general.

All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk.

Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV-AIDS or other immune system disorders, some elderly, and infants can be particularly at risk of infections. These people should seek advice about drinking water from their health care providers.

Infants and young children are typically more vulnerable to lead in drinking water than the general population. It is possible that lead levels at your home may be higher than other homes in the community as a result of materials used in your home’s plumbing. If you are concerned about elevated lead levels in your home’s water, you may wish to have your water tested and flush your tap for 30 seconds to 2 minutes before using tap water.

Although filtration removes cryptosporidium, the most commonly used filtration methods cannot guarantee 100 percent removal. Our monitoring indicates the presence of these organisms in our source water and/or finished water. Current test methods do not allow us to determine if the organisms are dead or if they are capable of causing disease. Ingestion of cryptosporidium may cause cryptosporidiosis, an abdominal infection. Symptoms of infection include nausea, diarrhea, and abdominal cramps. Most healthy individuals can overcome the disease within a few weeks. However, immuno-compromised people are at greater risk of developing life-threatening illness. We encourage immuno-compromised individuals to consult their doctor regarding appropriate precautions to take to avoid infection. Cryptosporidium must be ingested to cause disease, and it may be spread through means other than drinking water.

For more information about contaminants and potential health effects, or to receive a copy of the U.S. Environmental Protection Agency (EPA) and the U.S. Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by cryptosporidium and microbiological contaminants, call the EPA Safe Drinking Water Hotline at (800) 426-4791.

Plants need less water after July.
Remember to reset irrigation system controls monthly to deliver the amount of water that plants really need.

Source Water Assessment & Protection

A source water assessment has been completed by the State of Colorado. Consumers can obtain a copy of this assessment by going to the State’s Source Water Assessment and Protection (SWAP) Web site located at: www.cdphe.state.co.us/wq/sw/swaphom.html or by contacting the Water Division Manager at (970) 949-5887.

Total susceptibility to potential sources of contamination ranges between moderate and moderately high. This rating reflects conditions that exist throughout the entire watershed, and its overall potential for contamination. ERWSD continuously monitors its water sources, and is committed to delivering finished drinking water of the highest quality.

Potential sources of contamination in our source water area come from above ground, underground, and leaking storage tank sites, EPA hazardous waste generators, existing/abandoned mines, commercial/industrial/transportation, high and low intensity residential, pasture/hay, septic systems, road miles, other facilities, deciduous, evergreen, and mixed forests.

The Source Water Assessment Report provides a screening-level evaluation of potential contamination that could occur. It does not mean that the contamination has or will occur. We can use this information to evaluate the need to improve our current water treatment capabilities and prepare for future contamination threats. This can help us ensure that quality finished water is delivered to your homes. In addition, the source water assessment results provide a starting point for developing a source water protection plan.
### Microbiological Contaminants

<table>
<thead>
<tr>

**Note:** Terms & Abbreviations

The following definitions explain the many terms and abbreviations, that may be unfamiliar, which are used in this report.

- **Action Level (AL):** The concentration of a contaminant, if exceeded, triggers treatment or other requirements a water system must follow.
- **Compliance Factor (CFL):** Measurements should not be less than this factor.
- **High Solids (HS):** High solids, alpha was not tested.
- **Maximum Contaminant Level (MCL):** The maximum allowable is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MDLs as feasible using the best available treatment technology.
- **Maximum Contaminant Level Goal (MCLG):** The goal is the level of a contaminant in drinking water, below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
- **Maximum Residual Disinfectant Level Goal (MRDLG):** The level of a drinking water disinfectant, below which there is no known or expected health risk. MRDLG do not reflect the benefits of the use of disinfectants to control microbial contaminant.
- **Million Fibers per Liter (MFL):** A measure of the presence of asbestos fibers in water longer than 10 micrometers.
- **Milligrams per Year (megafy):** A measure of radiation absorbed by the body.
- **Nephelometric Turbidity Unit (NTU):** Nephelometric turbidity unit is a measure of the clarity of water. Turbidity in excess of five NTU is just noticeable to the average person.
- **MMPs per Year (mmpy):** A measure of radiation absorbed by the body.
- **Non-Tests (NT):** Not tested.
- **Parts per million (ppm):** One part per million corresponds to one minute in two years or one penny in $10,000.
- **Parts per billion (ppb):** One part per billion corresponds to one minute in 2,000 years, or one penny in $100,000,000.
- **Parts per trillion (ppt):** One part per trillion corresponds to one minute in 2,000,000,000 years, or one penny in $10,000,000,000.
- **Picocuries per liter (pCi/L):** A measure of radioactivity in water.
- **Running Annual Average (AAA):** An average of monitoring results for the previous 12 calendar months.
- **Secondary Maximum Contaminant Level (SMCL):** The highest recommended contaminant level.
- **Treatment Technique (TT):** A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.
- **Variances and Exemptions:** State permission not to meet an MCL or a treatment technique under certain conditions.
- **Waivers:** State permission not to test for a specific contaminant.
When Should I Water?

**MONDAY:**
No Outdoor Water Use

**TUES/THURS/SAT:**
Addressed ending in
ODD numbers may water

**WED/FRI/SUN:**
Addressed ending in
EVEN numbers may water

Water Use Regulations

Adhere to the Odd/Even watering schedule as above.

- Watering schedule based on last digit of street address.
- Keep all outdoor water turned off on Mondays.
- The irrigation day runs from midnight to midnight.
- Watering must occur before 10 a.m. or after 4 p.m. on your watering day.
- Hoses must have water saving shut off nozzles to prevent free running water.
- Permits are required for consecutive day irrigation.

Permit applications are available at our office and at erwsg.org/wise-use. Permits allow for irrigation on consecutive days excluding Mondays.

- Newly-seeded areas: Allows for 28 consecutive days excluding Mondays.
- Newly-planted sod, annuals, perennials and woody plants: Allows for 14 consecutive days excluding Mondays.

Swimming pools are limited to one filling per year, unless draining for repairs is necessary. Water shall be used for beneficial purposes only.

Water Efficiency

Stop by the Vail office to pick up free water conservation items:

- **Outdoors:** 6 position garden hose nozzle, soil moisture probe, rain gauge
- **Shower:** massage showerhead, 5-minute timer
- **Sinks:** bathroom aerators, dual spray kitchen aerator
- **Toilets:** leak detection kit, tank bank, flapper valve, fill cycle diverter

For more information, call the Water Conservation Officer at (970) 476-7480

Use Water Wisely

Eagle River
Water & Sanitation District
846 Forest Road
Vail, Colorado 81657

Prevent Water Waste

Water in the morning or evening. Check sprinkler heads for breaks, blockages, and over spraying onto pavement.
